Queen Anne

Queen Anne is a benchmark on the table potato market thanks to its exceptionally high yield and optical appearance. This very homogenous early crop shows a strong development on the field as well as a steady long term performance in storage. Enabled through following strong tolerances: PVY, PVYntn, bruising, scab, spraing/TRV and silver scurf and resistances: PCN Ro 1, 4, potato wart disease 1

Plant

Maturity	Early
Plant type	Stem type
Growth habit	Semi-upright
Color of flower	White
Foliage development	Rapid
Number of tubers	High
Dormancy	Very high

Tuber characteristics

Tuber shape	Long oval
Flesh color	Yellow
Eye depth	Very shallow
Skin color	Yellow
Skin characteristic	Smooth

Resistances

Nematodes	Ro 1, Ro 4
Potato wart disease	Race 1
Leaf blight	Medium, High
Tuber blight	High
Rhizoctonia	High
Black leg	High
Common scab	High
Internal rust spot	High
Second growth	Very high
Silver scurf	High, Very high
Damages	Medium, High
Bruising	Very high
PVY	Very high
PVY ntn	Very high

Yield and Quality

Market outlet	Ware, Premium quality for pre-packing
Yield	Very high
Share oversize	Low
Share undersize	Very low
Cooking type	Fairly firm cooking
After cooking discoloration	Low
Discoloration raw	Low
Dry matter content	Low, Medium
